

Find Subsurface Targets Fast!

With the Spectrum NDT Subsurface Inspection Team

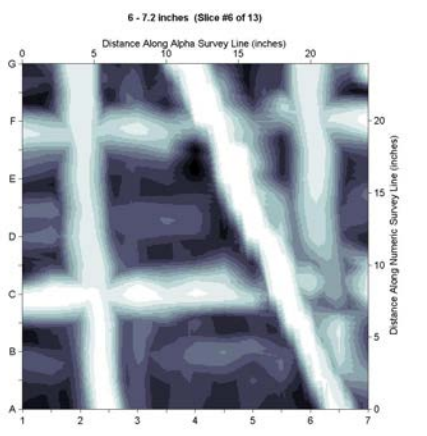

Ground Penetrating Radar For Subsurface Inspection

Spectrum now provides the **most comprehensive subsurface inspection team** in Calgary. With **over 20 years of experience** using **Ground Penetrating Radar (GPR)**, you know this team can assist in the timely completion of your projects, while maintaining your budget.

How do we do it? Spectrum combines the reliability of the GSSI GPR System with the added strength of a radio detection unit to ensure **buried services are found – the first time.**

A Spectrum inspection gives you these important benefits:

**Site ready crew, WHMIS, CSTS, fall protection, confined space
2 hour minimum – NO in town fuel or km charges**

Faster than x-ray with none of the safety concerns

Depth can be given in real time

Coordination with coring companies to deliver just in time results

Budget friendly

On site TODAY – flexible to your schedule

Millimetre depth slicing makes it easier to track subsurface targets

Plastic conduit detection – multi-phasing antenna assists in finding plastic conduit

3D in real time

Inspect walls, ceilings, suspended slab, slab on grade, tension cables...
